

Equation K , C , and complex $(\partial F/\partial x_v)_\omega$ vs full ALB NCP: 5 μm PD orbit ($k_p = 0.3$, $k_d = 0.5$; Moog 166 Hz, $\zeta = 0.7$; no imposed spool harmonic)

--- $-K\Delta x$ $(\partial F/\partial x_v)_\omega$ term (PD/Moog) ---○ Full nonlinear ALB NCP
-.- $-C\Delta \dot{x}$ — Total equation linearization
